

SPOTLIGHT ON

Our Elementary School

MRS. BORTZ'S FIFTH GRADE

Curriculum Crossover

In our fifth grade class you will find a teacher that is known for creating an interactive learning experience with curriculum crossover. A social studies project is likely to include writing, a science assignment often crosses over into both spelling and vocabulary. Mrs. Bortz emphasis hands on learning through relevant field trips that tie directly into our curriculum. A fun learning experience with an end result of deeper understanding and real life connections!

Final Projects

To ensure our students are ready for the assignments they will see in middle and high school, our wonderful Mrs. Bortz, does not just use standardized tests. Our fifth graders are well prepared to show their understanding with final projects. They create slideshow presentations using Google slides, engineer and build models out of Legos, and even create original pod-casts! Mrs. Bortz recognizes that different student show understanding in different ways, and that's a good thing!

Ask Our Teachers:

How do you prepare the upper grade students for middle school?

"Hello, my name is Mrs. Bortz and it is my job to get your child ready for middle school. I understand the importance of preparing my students for life after C.T.C.A. Students in my class will utilize the Google suite. In both private and public schools, students will need to know how to use the Google classroom and all of its components. I organize different subjects into individualized Google classrooms so students can focus on one subject at a time. Furthermore, I have my students write using Google docs and make art with Google drawing. My students learn to make and present Google slide projects in front of an audience. Plus, they have familiarity with Google forms. I am proud to say that my students leave me ready take middle school head on!" - Mrs. Bortz
